Characteristics of BRCA-mutated breast cancer

~5% of all breast cancer patients harbor germline BRCA1/2 mutation¹

For BRCA1/2 mutation carriers the lifetime risk for developing breast cancer is **~70%**²

Out of 10 HER2-negative breast cancer patients with germline BRCA1/2 mutation:

 **~6/10** may be HR+^{3,4}  **~4/10** may have TNBC^{3,4}

BRCA1/2, breast cancer gene 1 or 2; BRCAm, BRCA-mutated; CNS, central nervous system; HR+, hormone-receptor positive; TNBC, triple-negative breast cancer

Test early for BRCA mutations
